PROFILE

IT student specializing in software development, with hands-on experience building web apps using Vue.js, Quasar, Node.js and Supabase. Freelance background since 2019, plus several deployed personal products with data pipelines, scheduled jobs and CI. Passionate about clean code, modern tooling, and continuous learning. Currently looking for my first opportunity as a Junior or Trainee Developer.

PROJECTS

Vidriera — [vidriera-uy.vercel.app](#)

[TypeScript](#) · [Vue 3](#) · [Tailwind](#) · [Supabase](#) · [GitHub Actions](#)

Aggregator of the used-car stock of 27 Uruguayan dealerships: 2,300+ cars in one search, with price history and a fair-price check.

- Ingestion pipeline with 13 source adapters, each tested against recorded responses; scheduled with pg_cron + Edge Functions and GitHub Actions.
- Fair price = median of comparable cars, precomputed in Postgres materialized views; dedup across dealers.

Vidriera Insights — [github.com/JoaquinRSC/vidriera-insights](#)

[Python](#) · [pandas](#) · [scikit-learn](#) · [matplotlib](#) · [pytest](#) · [GitHub Actions](#)

Data analysis and ML price model of the Uruguayan used-car market, built on Vidriera's data (2,300 cars, 27 dealers).

- Gradient boosting price model with 5-fold cross-validation: matches the comparables method (10.6% error) while pricing 100% of the stock vs. 56%.
- Per-model depreciation (log-linear fits), within-model cost of mileage, dealer pricing; weekly automated report and CI with pytest.

Cuidauto — [cuidauto.vercel.app](#)

[Vue 3](#) · [Quasar](#) · [Pinia](#) · [Supabase](#) · [Web Push](#)

PWA for Uruguayan drivers: maintenance, legal deadlines and running costs, with push reminders before anything expires.

- Daily pg_cron job → Edge Function → one grouped Web Push per user; offline support via a custom Workbox service worker.
- Row Level Security on every table, DB-enforced plan limits, HMAC-verified Mercado Pago webhook; fuel costs from ANCAP open data.

EXPERIENCE

Freelance Developer

Self-employed | Jan 2024 - Jan 2025 | Remote

- Maintenance and improvement of a data management system built with Quasar + Node.js and a non-relational database.
- Bug fixing and optimization of existing features.

Freelance Frontend Developer

Self-employed | 2019 | Remote

- Developed a Progressive Web App (PWA) for a car dealership using Quasar CLI.
- Responsive interface adapted for both mobile and desktop.

EDUCATION

Tecnologo en Informatica (IT Technologist Degree)

UTU / UTEC / Udelar - Sede Buceo | Mar 2024 - Present

3-year university-level degree: software development, OOP, databases, operating systems, networks, software engineering, infrastructure.

Bachillerato Tecnológico en Informatica (Technological Baccalaureate)

UTU | 2018 - 2020

Programming, application analysis & design, web development, databases, operating systems; final integrative project.

TECHNOLOGIES & SKILLS

Frontend: Vue.js, Quasar, JavaScript, TypeScript, HTML5, CSS3, Tailwind, PWA

Backend: Node.js, Supabase (Postgres, Edge Functions, RLS), REST APIs, PHP

Languages: Python, C, C++, C#, Java, Bash

Databases: PostgreSQL, MySQL, MongoDB (NoSQL)

Tools: Git, GitHub Actions (CI/CD), Docker, Vitest, Vercel, Linux

LANGUAGES

Spanish: Native

English: Intermediate (B1) - Cambridge PET

Portuguese: Limited working proficiency (self-taught)
